

Rampion 2 Onshore Substation: Cowfold Information Event

Wednesday 21st June 2023, 4-8pm
The Allmond Centre, Cowfold, RH13 8BL

We are writing to you as a resident or business located within 1km of our chosen onshore substation site at Oakendene.

We are holding an information event dedicated to the Cowfold community, where local people are invited to meet members of the Rampion 2 Project Team.

You will be able to:

- view maps and plans
- see how the design of the onshore substation has evolved
- learn more about how we propose to mitigate impacts on traffic, views and the environment
- take a virtual tour of the Rampion Offshore Wind Farm
- see the project timeline and next steps in the development process

The Rampion 2 Offshore Wind Farm could generate up to 1,200 megawatts, enough to power over 1 million homes¹, meaning Rampion and Rampion 2 combined will be able to power all of the homes in Sussex, twice over.

¹Based on an average annual domestic household electricity consumption of 3,518 kWh (BEA, Dec 2015).
